

In the Name of God

As you know, the idea of creating social networks was established to connect users and transfer data and knowledge. But in later years, because human have negative traits, they lead people to the false effects of these networks.

We have repeatedly seen people being encouraged to like or comment on glamorous fake content, unaware that the content is well-planned and purposeful.

They take advantage of people's weaknesses to increase the publication of content and people blindly, unaware of the main aim of them, are spreading lies worldwide.

in terms of discrimination and hatred between ethnic groups, there are hostiles who, with the help of influential sponsors, are publishing the most inflammatory posts and images with hateful themes.

Ordinary users also blindly raise the issue of discrimination by sharing the content of these networks, and eventually social networks become a powerful accelerator that anyone who wants can light the hatred fire among others.

Due to the shortage of appropriate laws to prevent insults and discrimination between races and nationalities unfortunately, we have faced serious damage and if not prevented, the damage will be irrecoverable.

I present 3 proposals in a concise form for the esteemed audience:

- 1- Prevent the publication of content or divisive content and information using artificial intelligence in social networking software.
- 2- Avoid displaying the number of likes under the posts, which leads to a decrease in the popularity of the post.
- 3- Prevent the publication of posts and comments by unverified or fake cyberspace accounts
